

Assignment-1
Python Programming

Assignment Date	19 September 2022
Student Name	Kolla Haribabu
Student Roll Number	311019106032
Maximum Marks	2 Marks

Question-1:

Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma separated sequence on a single line.

Solution:

```
l=[]
for i in range(2000, 3201):
    if (i%7==0) and (i%5!=0):
        l.append(str(i))

print(','.join(l))
#_____#
#_____#
```

The screenshot shows a Python IDE window with a file named 'main.py'. The code in the editor is:

```
1 l=[]
2 for i in range(2000, 3201):
3     if (i%7==0) and (i%5!=0):
4         l.append(str(i))
5
6
7 print(','.join(l))
8
```

 The output window below the editor displays a long list of numbers from 2002 to 3199, separated by commas, which are all divisible by 7 but not by 5. At the bottom, a message states: "...Program finished with exit code 0" and "Press ENTER to exit console."

Question-2:

With a given integral number n, write a program to generate a dictionary that contains (i, i*i) such that i is an integral number between 1 and n (both included). and then the program should print the dictionary.

Suppose the following input is supplied to the program:

8

Then, the output should be:

{1: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64}

Solution:

```
n=int(input())
```

```
d=dict()
```

```
for i in range(1,n+1):
```

```
    d[i]=i*i
```

```
print d
```

```
#_____#
```

```
#_____#
```

The screenshot shows a Python IDE with the following code in the editor:

```
1 n=int(input())
2 d=dict()
3 for i in range(1,n+1):
4     d[i]=i*i
5 print(d)
```

The output console shows the result of running the program with input 8:

```
12
11: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64, 9: 81, 10: 100, 11: 121, 12: 144)
...Program finished with exit code 0
Press ENTER to exit console.
```
